# STATISTICS OF AGRICULTURE FOR ALBERTA

Compiled by the Statistics Division, Extension Service, Department of Agriculture

Based on statistics published by the Dominion Bureau of Statistics and
the Canada Department of Agriculture

## MONTHLY REVIEW OF THE AGRICULTURAL SITUATION

WHEAT:

The four major exporting countries estimate that on or about March 1, 1954, they held 1,869.9 million bushels of wheat for export and carry over, some 27.1 per cent greater than the 1,471.6 million bushels available a year ago. Supplies in millions of bushels, including on-farm stocks with last year's figures in brackets were: United States, 906.7 (654.4); Canada 671.2 (546.9); Argentina, 147.7 (151.6); and Australia, 144.3 (118.7). Estimated production of world wheat in 1953 now stands at 7,150 million bushels, 145 million bushels less than the record harvest of 1952. Rye production is estimated at 1,540 million bushels, 60 million bushels less than in 1952. Canada guaranteed 163,231,000 bushels under the International Wheat Agreement 1953-54 crop year. Sales to March 23, 1954, had amounted to 70,649,000 bushels.

COARSE GRAINS:

Exports of grains other than wheat during the 1953 calendar year were valued at 224.7 million dollars compared to a total of 235.2 million in 1952. In both years these exports ranked fifth among Canada's export commodities. Early in the present crop year insufficient oats were delivered to the Wheat Board under the original three bushel quota to ensure adequate supplies to meet requirement in the domestic and export markets. Supplementary quota's totalling 12 bushels were therefore authorized at points where appreciable quantities of oats of the desired quality appeared to be available. It is reported that the additional quota's have aided materially in bringing out the necessary supplies.

LIVE STOCK:

Shipments of Canadian cattle to the United States from January 1 to April 3, 1954, 1953 figures in brackets were: beef cattle, 9,651 (242); dairy cattle, 7,193 (6,052); calves, 180 (278); hogs, 2,153 (136); and sheep 80 (158). Dressed meat exports to all countries were: beef 11,406,587 lbs. (8,512,226); pork, 9,000,134 lbs. (8,007,512); mutton and lamb 9,087 lbs. (12,672).

POULTRY:

The number of eggs placed in incubators in registered hatcheries in Alberta January 1st to April 10th, totalled 8,776,000 compared to 8,090,000 for the same period in 1953. Turkey eggs placed were 798,435 to April 10 compared to 661,380 last year.

MISCELLANEOUS:

The Alberta Department of Agriculture issued its first crop report for 1954 on May 4th. Should the warm weather now enjoyed continue, field operations will get under way in southern and eastern areas before the end of the week. Field work will begin in most other areas early next week. Conditions are most backward in western areas.

## Alberta Summary for Period Ending 1st March, 1954.

(Source: Labour Gazette, Volume 54, No. 3, March, 1954)

General economic activity in the Prairie Provinces reached the winter low and began to increase slowly during February. During December and January non-agricultural employment in the region dropped below last years levels. The decline reflected in part the effect on construction work of unusually severe weather. In addition manufacturing employment was down in all Prairie Provinces and the effect of smaller grain shipments also began to show in railway employment. This situation remained virtually unchanged through most of February Toward the end of the month, however, there was a slight increase in labour requirements, indicating that while no appreciable swing in employment could be expected before spring, the level of general economic activity had reached its low point for the winter.

During February the labour surplus in Lethbridge was reduced from substantial to moderate proportions.

In contrast to the sharp increase of the previous month unemployment in the metropolitan areas showed no change during February. Employment in railways and food processing continued below last year levels and additional lay-offs were reported in the iron and steel industry. On the other hand labour demand in some manufacturing industries and in agriculture was gradually increasing and milder weather permitted the recall of workers to construction jobs.

The labour supply and demand were in balance in Drumheller, unchanged from the first of February.

The only area to change classification was Lethbridge, where increasing employment in construction, transportation and agriculture was sufficient to bring the area to the moderate surplus category in spite of relatively heavy lay-offs in the coal mining industry.

### Employment and Payrolls

The Dominion Bureau of Statistics collects monthly data from firms, usually having 15 or more employees. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are not included. Employees engaged in agriculture, government, and educational services are excluded. Wages represent gross earnings before deductions for unemployment insurance, taxes, pension funds, etc. are made. They also include the cost-of-living bonus, made at frequent intervals. They exclude value of board and lodging, employers' contributions to unemployment insurance, workmen's compensation and pension and welfare funds as well as bonuses paid at irregular or infrequent intervals such as annual bonuses and retirement gratuities. The following tables compare the employment and wage situations at the 1st of February, 1954, with that existing one year earlier in the main non-agricultural industries of the province of Alberta. Figures for the cities of Calgary and Edmonton are shown as well.
